Sean Dingley

Thank you very much for all your help in designing and engineering the scaffold equipment on our current construction project. Due to our remote location we often need to be innovative in our construction methods, as we cannot use cranes to install our roof system. We needed to be able to rely on the scaffold equipment to place and erect our very heavy truss systems. Your help was very much appreciated in putting this together and designing the scaffold system in such a manner that was both safe and reliable to do the work efficiently and effectively. It has worked out great and we are well on the way to completing the construction of this project at our camp.

Thank you very much for your participation in our project.
